

## Office Space Rental's Commission

Create a Java application to compute commission of a realtor who finalizes a lease agreement between lessor and lessee. To create a complete program, follow the steps below.

Create a Java class, OfficeSpaceCommission.java, for an office space leasing in a building. The program should prompt the user for the following inputs.

- Realtor Name
- Width of office space in feet
- Length of office space in feet

The program will then display outputs including the following information.

- Realtor name
- Office space in square feet
- Leasing fee per month (\$25.00 per square foot)
- Leasing agreement (Total leasing fee for 1 year)
- Leasing commission (5% of leasing agreement)

### Sample Runs:

```
> run OfficeSpaceCommission1
Office Space Leasing Commission
Enter Realtor Name: John Doe
Enter width of office space in feet: 40
Enter length of office space in feet: 30

Leasing Commission Summary
Realtor name: John Doe
Office space: 1200 square feet
Leasing fee per month: $30000.00
Leasing agreement for one year: $360000.00
Leasing commission for this agreement: $18000.00
```
