

Method - a block of code that performs a particular task

What is class in Java?

Class is a blueprint of a Java application

What is the purpose of the main method in Java?

To indicate where to begin running and ending the Java application.

Data Type:

1. String - sequence of characters
2. int - a numerical data without decimal point (uses 32 bits)
3. double - a numerical data with decimal point (uses 64 bits)

Placeholder - the blank for only printf

1. Different types of data need different amounts of space
2. %f for double (64 bits of blank)
3. %d for int (32 bits of blank)
4. %s for String (blank depends on character count)
5. Can have multiple blanks in the same line, just need to make sure the data lines up with the blanks
